HG oven and grill revamp kit

- extremely strong gel formula
- even soaks away baked-on stains

The **HG oven and grill revamp kit** contains an extremely strong soaking gel that removes even the most difficult to remove baked-on baking stains in the oven or grill, but also from baking trays, barbecue grills and hot plate grills effectively. This unique gel formula has been developed especially for a long soaking period, without drying out, on vertical surfaces, which means even the most difficult baked-on baking stains on oven walls or grills can be removed effectively. The gel is easy to apply with a special supplied brush.

This kit contains:

- 1 jar *HG oven and grill soaking gel* 600 ml
 - 1 resistant brush
 - 1 special *HG oven sponge*
 - 1 pair of protective plastic gloves
- See the side of the packaging.

Directions for use:

Wear the supplied gloves whilst using the product. Work carefully and prevent the product from coming into contact with the skin. Should this happen accidentally, rinse immediately with plenty of warm water.

Open the jar and carefully remove the plug. Put the plug aside on a piece of kitchen paper or aluminium foil in order to avoid dripping. Apply the gel liberally on the surface with the special brush. Depending on the amount of staining, leave the gel to work for 5-30 minutes, but never longer than 30 minutes. Remove the gel with kitchen paper or a damp sponge and finally remove any residues thoroughly with water. After use, rinse the brush with plenty of water.

It may be necessary to repeat the treatment on very old baked-on stains. In such cases it is recommended to rub the surface with the *HG oven sponge* during soaking. After use close the jar again by means of the plug and the lid. Take off the supplied gloves.

Tip:

Lightly heating the oven or grill may make it easier to remove even the most difficult baked-on baking stains. However, the surface may not become hotter than 30°C.

Attention: Transport and store the box upright. Keep in a frost-free area. Do not use on aluminium or on the outside of the oven or grill. Not suitable for use on surfaces with a so-called non-stick coating. Always consult the instructions for your appliance first. Prevent the gel from running onto sensitive surfaces, such as plastic, wood, composite, etc. Should this happen accidentally, clean immediately with plenty of water. A combination of a temperature of the oven or grill that is too high and *HG oven and grill soaking gel* can cause damage to the surface. If the black scouring side of the *HG oven sponge* is used on stainless steel, this may cause scratching.
