## OVEN CLEANER

500 ml e

### HG oven cleaner

*HG oven cleaner* quickly and effectively removes burnt-in and caked-on grease from ovens. This product is also suitable for stainless steel hobs, grills and barbecues.

**Instructions:** Push in the nozzle on the front and turn a quarter turn. We recommend you rinse the nozzle with hot tap water by running the water through the air holes in the side of the foam pipe. Spray *HG oven cleaner* onto the surface that requires cleaning. When treating stainless-steel parts, treat the complete surface to prevent colour differences. Leave the product to work for 3-5 minutes. If necessary, scrub with a wet sponge. Then wipe off the surface with a sponge. After all the grease has been removed, clean the oven once more with hot water! If necessary, repeat the treatment several times on barbecue grills and oven trays. If the results are still disappointing, we advise heating the surface to be cleaned until it is warm to the touch. Check the temperature of the surface before applying the *HG oven cleaner*. It should not exceed  $\pm 30^{\circ}\text{C}$ . Now treat the surface as previously described. Turn the nozzle a quarter turn after use (OFF).

**Caution: Transport and store the bottle upright.** Not suitable for use on untreated aluminium or on the outside of the oven, grill or barbecue. Wear suitable gloves during the treatment. Before use, check the instructions for your device. Prevent any liquid from running onto worktops, but should this happen clean it immediately with plenty of water. Too high a temperature in combination with *HG oven cleaner* may damage the surface.
