### HG limescale remover foam spray **super powerful**

- removes stubborn limescale quickly and thoroughly
- 3 times stronger than the limescale remover foam spray

Every day, sanitary ware is exposed to limescale because water and limescale go hand in hand. Limescale leaves a dull haze on tiles, shower cubicles, plastic bath tubs, sinks, taps, worktops and in the toilet. Fortunately we have *HG limescale remover foam spray*, but sometimes the limescale is more persistent than we thought! So we developed *HG limescale remover foam spray super powerful* especially for those situations! This extremely powerful, 3x stronger formula removes that type of persistent limescale quickly, easily and thoroughly, leaving a brilliant shine.

**Directions for use:** Press the nozzle at the front side and turn a quarter. If you have used the bottle before, remnants of the liquid may be left in the nozzle, causing it to work less well when you reuse the bottle. Before reusing the bottle, we recommend you rinse the nozzle with hot tap water, e.g. by running the water through the air holes at the side of the foam pipe. Spray on *HG limescale remover* and allow some time for it to work. Then rinse off or remove with a damp cloth. If the deposit is stubborn, simply leave *HG limescale remover* to work for a little longer. However, no longer than 5 minutes and do not let it dry. Repeat the treatment as required. Regular cleaning with *HG limescale remover* prevents the build up of a layer of limescale and your shower, bathroom or worktop will always look shiny and clean. Turn the nozzle a quarter backwards after use (blocking position).

Attention: Transport and store the bottle upright. Besides the familiar silver-coloured **chrome** (made of chrome), there is now also sanitary ware of different colours that is not acid-resistant. Before using this product, check the manufacturer's maintenance instructions for the sanitary ware.

Do not apply *HG limescale remover* on marble, or other types of calciferous natural stone or other non-acid resistant surfaces. After spraying the liquid onto persistent limescale we recommend using a bathroom sponge. For enamelled baths use *HG limescale remover concentrate* diluted 1:10 in water. Ventilate well during use.

Medical personnel can request the data sheet via +31 36 54 94 777

The consumer's information sheet can be obtained via [www.HG.eu](http://www.HG.eu)

contains a.o.:
