500 ml e

HG freezer de-icer

- works quickly and effectively

When the deep freezer or the freezer compartment ices up, it becomes smaller and the energy consumption goes up significantly. Thanks to *HG freezer de-icer*, this ice can be removed simply and quickly, without the frozen food having time to defrost. Regular use of *HG freezer de-icer* reduces icing-up to a minimum. This saves costs because of lower energy consumption and it extends the lifespan of your freezer.

Directions for use: Turn the nozzle on the front side a quarter. Turn off the freezer, empty it and scrape away and remove any ice which is easily loosened (the thick layers). Spray the remaining ice evenly and liberally with *HG freezer de-icer*. Leave to work for 5 to 10 minutes and then scrape away any loose ice. Repeat the treatment if necessary. After removing the ice, dry the walls of the freezer, and the freezer can be switched back on, ready for use again. Turn the nozzle a quarter after use (OFF).

Attention: Transport and store the bottle upright. Do not spray onto food. Use a plastic scraper to remove the ice, in order to avoid damaging the freezer.
