HG grout cleaner concentrate

- restores the colour of the grout

HG grout cleaner concentrate is a buffered, synthetic cleaning agent. These properties mean it continues to work at the same powerful level whilst it is left to work and during scrubbing afterwards. *HG grout cleaner* can be used on different types of grout between wall tiles, floor tiles and bricks.

Directions for use: Dilute *HG grout cleaner concentrate* 1:4 in lukewarm water. Apply the solution to grout joints with a brush or scrubbing sponge. Leave to work for approx. 10 minutes then scrub the grout with the brush or scrubbing sponge. Finally clean with lukewarm water to remove the dirt (it is important to clean the sponge repeatedly in clean water). Leave to dry. If necessary repeat the application. Discoloration of grout in shower cubicles and bathrooms is often caused by limescale, in which case *HG limescale remover concentrate* should be used. For grout that has become black (mould) use *HG mould spray*.

Coverage: 0,5 litre is sufficient for 10-15 m² tiled surface.

Attention: Transport and store the bottle upright. It is recommended to test this product in an inconspicuous place first. Not suitable for gloss surfaces, surfaces that are sensitive to acids, or grout treated with gloss paint. Not to be used on grout of lime-containing tiles (as marble etc.). The results may not be optimum on silicon grouting.
