## HG protector for untreated wooden furniture

HG "protector for untreated wooden furniture" is a unique invisible protector for (indoor) furniture, made for untreated wood, such as teak, hardwood, oak, or pinewood. The product provides basic protection and prevents the formation of rings, grease stains and other marks.

**Directions for use:** 1. Before applying HG "protector", make sure the wood is completely clean, dry and free from grease. Any existing marks are best removed by lightly sanding the surface with fine sandpaper. 2. If you apply HG "protector" for the first time, apply it with a brush. The wood will become a little darker, but when it has dried, it will lighten again. 3. Leave HG "protector" to dry for at least 1 hour before using the furniture again. After 24 hours you can clean the furniture. 4. Repeat the treatment once every six months, but apply the liquid with a lint-free cloth. 5. For furniture that is used frequently and that requires regular or daily cleaning, such as tables, it is recommended to clean it only with HG "cleaner and protector for untreated wooden furniture" in order to keep the protection of HG "protector" at optimum levels.

0534200102506 1910

contains a.o:  
preservation agents: Benzisothiazolinone,  
Methylisothiazolinone

**Coverage:** 4.5 – 6.5 m<sup>2</sup> per 250 ml, depending on the type of wood.

**Attention:** HG "protector" can also be used to provide oiled furniture with an additional protective layer. Test it first in an inconspicuous place. If the treated mark dries up grey/white or stained, you cannot use HG "protector". HG "protector" may give a slight colour change to the wood.

**Transport and store the bottle upright.** 2,50% of the mixture consists of component(s) of unknown toxicity.
