## whiter than white detergent

for washing by hand and in the machine

400 g e

### HG whiter than white detergent

- for washing by hand and in the machine
- white fabrics become whiter than white
- sufficient for 6 washing cycles

There are many dangers when whites need to be white. It can become yellow with sunlight, grey through washing, discoloured because it was washed with other coloured fabrics. *HG whiter than white* prevents and removes greying, yellowing, discolouring. *HG whiter than white* when white fabrics need to stay white or become white!

**Directions for use:** The inside of the cap is a measuring cup with measuring rings. Shake the measuring cup every so often during filling to distribute the powder evenly, and to ensure you measure the correct amount. **Machine wash:** Put the laundry (approx. 2.5 kg) in the drum. Fill the measuring cup with powder in accordance with the following table. Pour this amount in the detergent drawer. Use the main cycle at 40 or 60 degrees, without adding normal detergent. You can use fabric softener in the softener drawer. **Hand wash:** Fill the measuring cup to 80 ml. Dissolve this amount in approx. 5 litres of lukewarm water (30-35 degrees). Put the laundry in the mixture and leave it to soak for at least 2 hours. Rinse the fabric twice with clean water. If the laundry looks like it is turning pink during soaking, the soaking time must be extended by one hour. **Attention:** Do not add any other detergent or stain remover, because this makes our product less effective. If your white laundry has stains or if it is

very dirty, we recommend you wash your white laundry with a programme that contains a pre-wash. You proceed as follows: Depending on the type of stain, treat them with *HG laundry pre-treat stain remover gel* or *HG stain away 1 to 7*. Add normal detergent to the pre-wash tray and the correct amount of *HG whiter than white* to the main detergent tray. Start the programme at 40 or 60 degrees. This removes the stains and dirt from your white laundry without making *HG whiter than white* less effective. The same applies to washing by hand: If the white laundry has stains or if it is very dirty, treat it first with *HG laundry pre-treat stain remover gel* or *HG stain away 1 to 7* and then wash it with a normal detergent. After rinsing, use *HG whiter than white* as described in the directions for "hand wash". Not suitable for wool, silk or coloured fabrics. Always follow the washing instructions for the relevant clothing. If persistent stains remain or if the laundry is still discoloured, repeat the treatment. The large range of textile dyes means that it is not always possible to guarantee a discolouring result. *HG whiter than white* may be less effective on certain synthetic materials. **TIP:** for clothing that has greyed or extra whitening: soak white laundry for 1 night in a bucket of water with 65 grams *HG whiter than white* and then wash immediately in the machine (do not allow to dry). **Usage:** Approx. 65 grams per wash. The content of this pot is enough for approx. 6 machine or hand washes.
