LAUNDRY ROOM

colour run restorer for whites

effective at all
temperatures

200 g e

HG colour run restorer for whites

- effective at all temperatures
- for washing by hand and in the machine
- also suitable for wool
- sufficient for 2 washing cycles

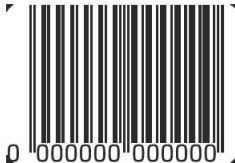

Your white laundry discoloured because you included an item that was not colour-fast? No problem! *HG colour run restorer for whites* offers the opportunity to restore the laundry. This product is suitable for hand wash and machine wash and can even be used for delicate fabrics, such as wool.

Directions for use:

Machine wash: Put the discoloured laundry in the drum (but don't fill the drum too full). Add approx. 100 gram *HG colour run restorer* to the main detergent tray. Start the main programme without adding any other detergent.

Hand wash: Dissolve approximately 50 gram *HG colour run restorer* in approx. 5 litres of water (water temperature depends on the care label of the garment). Place the discoloured laundry loosely under water and leave to soak for approx. 2 hours. Occasionally turn over the laundry during soaking. Then squeeze the laundry carefully and rinse it twice with clean water. Squeeze the laundry and spin it if possible.

Attention: please see inside. Transport and store the bottle upright.

Use: Approx. 100 gram for a machine wash and approx. 50 gram for a hand wash. Enough for approx. 2 machine washes and approx. 4 hand washes.

Attention: Always comply with the care label in the clothing. When you notice that your fabric discoloured, **do not leave it to dry**, but treat it as quickly as possible. If the result was not satisfactory, repeat the treatment. The large range of textile dyes means that it is not always possible to guarantee a discolouring result. Do not treat the garment (not colour-fast) that caused the discolouring.
